FAITH COMMUNITY NURSING**Topic: Breast Cancer Awareness**

Breast cancer remains one of the most common cancers affecting women worldwide. With 1 in 8 women diagnosed with breast cancer in their lifetime, raising awareness about this disease is crucial.

Early detection through regular screenings, such as mammograms, can significantly increase the chances of successful treatment. Women aged 40 and above are encouraged to have annual mammograms. Knowing your family history and discussing it with your doctor can also help in creating a personalized screening plan. Please access the sites below for information regarding risk factors, screening, early detection, treatment and more.
